

Eugene Ferris

Project: Eugene Ferris

Location: Barrow, Ardfert, Co. Kerry

Solution: Solar PV: 20 panel (16.2m²) solar photovoltaic array with average annual output of 2104 kWh/a

Completion Date: 2014

Annual Output: 5.456 Mwh

Energywise Ireland has built a strong reputation for design and installation of renewable energy systems including solar PV panels. Many people building new build homes across Ireland are installing solar photovoltaic systems, this is due to outstanding benefits that solar PV offers. Many new builds are also installing solar PV to help satisfy the current building regulations, ensuring that at least the minimum required proportion of their energy needs are met by a renewable energy source.

With our solar PV systems, you are guaranteed free electricity. Our Solar PV systems carry a 25 year guarantee, meaning you'll be getting free electricity guaranteed over that period. Solar PV will also help produce hot water in your home. As well as producing electricity for use all around the home, when there is an excess of supply, it will heat your water before being exported to the grid. Many homeowners having researched solar PV and the benefits of the system see this as an investment and the way forward to reduce the future energy costs of running their homes.

"The three year anniversary of EnergyWise Ireland installing the P.V. system on our home was 27th of July 2017. The power produced from the system since instillation is now more than more than 16.37Mwh. The system has been running trouble free and without a hint of an issue from the high winds we frequently get in the winter around our coastal region. All in all, gentlemen we are very pleased with the system and we lower electricity bills for years to come. Thanks for the great job. I hope to see a lot more PV systems in the future, it makes so much sense. I am glad to recommend EnergyWise Ireland if you are considering the option of PV solar panels on your home or business. They have the experience, expertise and resource to provide professional service and an excellent finished job."

Eugene Ferris, Barrow Ardfert, Co. Kerry

SolarEdge PV Monitoring Platform

The SolarEdge PV Monitoring Platform is a cloud-based platform that provides system monitoring. It displays real-time data for each module, the monitoring portal allows:

- Full visibility of your system's performance
- Automatic alerts on system issues
- Easy access from a computer, smartphone, or tablet.
