

Optimising for the Future

Install SolarEdge **today:**

Just before the UK market moves from export/FiT to self-consumption, now is the time to install a SolarEdge PV system on your roof.

Upgrade to StorEdge™ in 2016:

Add battery storage to your existing SolarEdge system to reduce your electricity bills and increase your energy independence. Unused PV power is stored in the battery and utilised when needed to maximize self consumption.

Maximise your investment with SolarEdge:

- Put **more panels** on the roof for maximum roof utilisation
- Get **maximum power out of each panel**. With SolarEdge the weakest panel does not affect other panels and therefore does not lead to energy losses
- Monitor the **performance of each panel and of the battery** to maximise system uptime and self-consumption
- **Protect** assets and people through the safety mechanism which is designed to **shut down high DC voltage** during installation, maintenance and emergency situations

Monitor the battery status, PV production and self-consumption data on one dashboard

Optimising for the Future

Today - monitoring self-consumption:

5kW System on April 8, 2015 (before battery installation)

Total produced energy	Total purchased energy	Total consumed energy	Self-consumption level
21.37 kWh	13.57 kWh	20.61 kWh	7.04kWh 33%

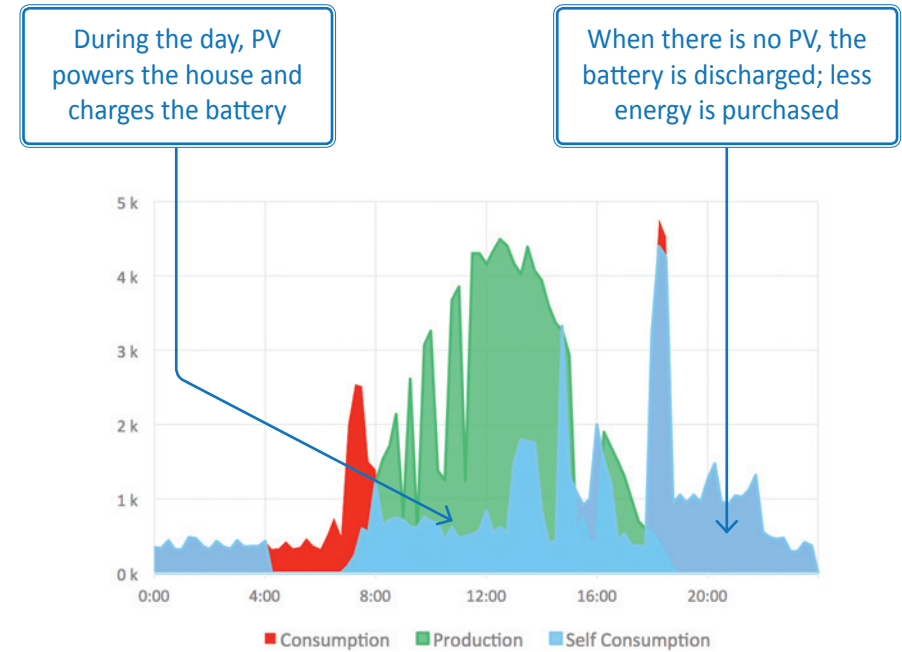

Later - increasing self-consumption:

5kW System on April 15, 2015 (after battery installation)

Total produced energy	Total purchased energy	Total consumed energy	Calculated self-consumption level
25.41 kWh	3.17 kWh	21.53 kWh	18.36kWh 72%
